

Envirothon

The Envirothon is a problem solving, natural resource program for high school students. Teams of five students are challenged to hone critical thinking skills and work as a team to both answer written questions and conduct hands-on investigation of environmental issues in five categories: water, soil, forestry, wildlife and a current environmental issue. A sixth component integrates all five test categories and requires teams to use an interdisciplinary approach through an environmental simulation activity. Teams compete on local/regional, state and international levels.
